

Through the Lens

Video Evidence Recovery Basics for Law Enforcement and Government Investigators

Video is integral to modern-day criminal investigations, with its prevalence increasing with each passing year. Nearly every crime committed in public, and often in private, have some sort of video evidence that can be retrieved and used in our pursuit of justice. Our front-line responders and investigators are often unacquainted with the video systems that are common throughout the businesses and homes in our communities, leading to severe delays in our ability to investigate criminal activity. Worse yet, when crimes turn violent the presence of video is key in locating the perpetrators before they can do harm onto the public or law enforcement.

Through the Lens – Video Evidence Recovery Basics is a two-day long training course designed to assist law enforcement personnel in the retrieval of evidence from DVRs (digital video recorders) and other CCTV/video recording systems.

Using a mixture of classroom instruction and practical exercises, participants are given a broad experience of video retrieval at every stage of a case, from call to court. Hands-on use of numerous video systems, which are commonly encountered at homes and businesses, supplements instructor presentation. This provides participants the opportunity to obtain real-world experience in searching for and exporting video in mock scenarios design to challenge the attendees.

Topics covered include the basics of video technology, how video recorders function, area canvassing, DVR/video system usage, exporting video, report writing, evidence storage/retention, legal and ethical considerations, and court testimony. Participants are provided with materials and tools that will aid in their future video recovery efforts.

This class is open to any law enforcement personnel who may have occasion to retrieve video evidence, such as those in patrol, supervisory staff, detectives/investigators, crime scene technicians, and support staff (including civilians).

The course is designed and taught by active law enforcement personnel who have an expertise in video technology and digital evidence handling. Students will receive a certificate upon completion of the course.

Price: \$395 per student

Video Evidence Recovery Toolkits

Comprehensive Tools for Field Recovery of Video

Video can be invaluable evidence in most incidents, no matter the significance. It can refute or support claims, identify unknown suspects, and in the worst of circumstances it can be used to track the movement of those who have inflicted violence upon the public or officers.

How prepared is your agency to recover this evidence?

Whether it's a broken port, an unrecognized USB drive, a lack of a monitor, or the use of antiquated discs, having a toolkit available can alleviate the struggles often faced by agencies of all sizes.

Penumbra offers two levels of toolkits; Basic and Advanced.

The Basic Kit (\$499 plus shipping) includes all of the base equipment that personnel can leverage to recovery video evidence, at a minimal cost and contained in one easy-to-transport package.

The Advanced Kit (\$1,995 plus shipping) includes everything contained in the Basic Kit, with the addition of a portable monitor and a high-end laptop computer, which has been specially configured with all the programs and resources needed to playback acquired video at the scene. The ability to do this can save valuable minutes and hours when time is of the essence.

Paired with our training — [Through the Lens - Video Evidence Recovery Basics](#) — personnel tasked with acquiring video can use these premade video evidence recovery toolkits to acquire video under all manner of circumstances, whether it is routine, unusual, or urgent.

Agencies who purchase a kit in conjunction with a training course registration will receive 10% off! Agencies who have previously sent personnel to the training will receive this same discount.

Tax-free for exempt organizations
